

## Grade 5 | Module 2 | Topic H | Measurement Division Word Problems

## Welcome

This document is created to give parents and students a better understanding of the math concepts found in the Eureka Math (© 2013 Common Core, Inc.) that is also posted in the Engage New York material taught in the classroom. Grade 5 Module 2 of Eureka Math (Engage New York) Multi-Digit Whole Number and Decimal Fraction Operations. This newsletter will focus on solving multi-step measurement word problems using multi-digit division.

## Words to Know

- Model/Tape Diagram
- Reasonableness
- Equation/Number Sentence
- Solution/Answer
- Units/Sections

## Objective of Topic H

Solve division word problems involving multi-digit division with group size unknown and the number of groups unknown.

## Online Practice

Check out www.zearn.com for extra practice as well!

## Things to Remember

- Tape Diagram: Drawing that looks like a segment of tape, used to illustrate number relationships.
Example: There are 452 heat pamphlets that must be delivered to 4 hospitals. If each hospital receives the same amount, how many pamphlets are delivered to each hospital?

1 hospital

The whole diagram represents the 452 pamphlets. Since tether are 4 hospitals, the diagram is divided into 4 units/sections. To find the value of 1 unit/section you would divide 452 by 4 .

- Approach to solving a problem: Draw a model, write an equation/number sentence, compute, and assess the reasonableness of the answer/solution.

## Example Problems

Example 1: Billy is saving for a 52 inch flat screen TV that cost $\$ 1,218$. He already saved half of the money. Billy earns $\$ 14.00$ per hour. How many hours must he work in order to save the rest of the money?
Step 1: \$1218

Step 2:

## \$1218

## Draw a tape diagram to

 represent $\$ 1,218$ which is the amount he needs to buy the TV. It is divided into 2 equal units since the problem states that he already saved half of the money.To find out how much he already saved, we divide 1218 by 2 .

## Equation:

$1218 \div 2=609$
*Continued from Page 2*

| Step 3: |
| :---: |
| \$1218 |
| $\$ 609.00$ |
| Saved  <br> $\$ 609.00$ How many <br> hours does <br> he need to <br> work? | to $\$ 609.00$. contained in 609.

If half is equal to $\$ 609.00$, the the other half is equal

Since he makes $\$ 14.00$ per hour, we want to find out how many 14 s are

> Number Sentence: $609 \div 14=43.5$

## Solution/Answer: Billy needs to work 43.5

 more hours.
## Reasonableness:

Student could round 14 to 10 and 60

$$
\begin{aligned}
& 609 \div 14 \\
\approx & 600 \div 10 \\
= & 60
\end{aligned}
$$

OR

$$
\begin{aligned}
& 609 \div 14 \\
\approx & 600 \div 15 \\
= & 40
\end{aligned}
$$

is a multiple of 10 . Since 14 is rounded down to 10 , the answer will be less than the estimate.

Student knows the t 15 is a factor of of 60 and 15 is very close to 14 .

Example 2: Mr. Smith has 1354.5 kilograms of potatoes to deliver in equal amounts to 18 stores. 12 of the stores are in Lafayette. How many kilograms of potatoes will be delivered to stores in Lafayette?

The tape diagram drawn to represent the total kilograms of potatoes ( 1354.5 kg ) that needs to be delivered to 18 stores. The three dots in the rectangle between 12 and 18 represent stores 13 to 17.
Step 2: The model is showing 18 units (equal sections) that equal 1354.5. We have to find the value of 2 unit or section.

Equation: $1354.5 \div 18=75.25$
75.25 kg of potatoes delivered to each store.

|  | $\mathbf{1 4 0 0} \div \mathbf{2 0}$ |
| :--- | :--- |
| $\approx(1400 \div 2) \div 10$ | Assess the reasonableness: |
| $=700 \div 10$ | Round the divisor: 18 rounds to 20 |
| $=70$ | so our whole or dividend is 1400. |

We can conclude that 75.25 does make sense since it is close to 70 .

Step 3: Now that we know the kilograms of potatoes delivered at each store, we need to multiply 17.25 kg times 12 to determine how many kilograms of potatoes were delivered to the 12 stores in Lafayette.
Equation: $\quad 75.25 \times 12=903 \mathrm{~kg}$

## Solution/Answer: 903 kg of potatoes were delivered to 12 stores in Lafayette.

## Assess the reasonableness:

When studying the model it is easy to see that more than half of the total amount of potatoes is being delivered to stores in Lafayette . 903 is more than half.

Flipped Learning: A great way to review what your student is learning in the classroom. Visit the links to videos for each lesson in this topic.
